

Attachment And Link Manifest

Recommended Email Attachments

Attach these generated handoff files first, either as Markdown or from the matching files in the PDF folder:

- `project-brief.md`
- `build-01-piezo-crystal-plate-pendulum.md`
- `build-02-acoustic-cymbal-hoverboard-bench.md`
- `controls-and-data-protocol.md`
- `templates/run_manifest_template.yaml`
- `templates/data_columns.csv`

Keep these source files in reserve for provenance. Link them or send them only if Krit asks for the underlying source material:

- Hacking the Simulation PDF
- Antigravity Devices HTML
- DIY Hoverbike PDF

Keep the supplemental theory PDFs as follow-up material:

- OPH dark matter paper
- Compact OPH paper
- χ_{nu} susceptibility bounds paper

Best Source Material For Krit

Most Build-Relevant

Hacking the Simulation PDF

Use for the self-reading PoC logic, the plate build, the pendulum/balance protocol, the dummy, and the artifact controls.

Antigravity Devices HTML

Use for claim boundaries. It separates conventional acoustic lift, ion-wind lift, refuted claims, and the open χ_{nu} hypothesis.

DIY Hoverbike PDF

Use only for the cymbal geometry and first-light pot-lid details: four dishes, three transducers per dish, 60 percent radius placement, phase-locked drive, and the single pot-lid pendulum precursor. Do not present the human-carrying claims as established.

Useful But More Speculative

Hover Disk HTML

Use for materials ranking and the larger coherent-substrate story. Put the build guides ahead of it.

How To Build A UFO HTML

Use for the broad architecture and motivation. Treat the build guides as the lab manuals.

Supplemental Theory

OPH dark matter paper

Use for the dark-sector motivation.

Compact OPH paper

Use for the compact OPH technical foundation.

χ_{nu} susceptibility bounds paper

Use for χ_{nu} bounds and force-law motivation. This is technical and should not be the first file a student reads.

Public Links

- Blog article
- Public overview
- NotebookLM for questions
- TinyLev acoustic levitator paper

Suggested Email Attachment Bundle

If you want one folder to send, zip:

`krit-antigravity-student-project-package/`

If you want a smaller first message, attach only:

`email-draft.md`

`project-brief.md`

`build-01-piezo-crystal-plate-pendulum.md`

`build-02-acoustic-cymbal-hoverboard-bench.md`

`controls-and-data-protocol.md`

Then link the public pages and offer the longer PDFs as follow-up.
